The DermaGraphix Dashboard organizes patient images for optimal review and assessment.

- View all captures of the same lesion in a single column; all lesions captured during the same visit in a single row.
- Filter, search, and sort images by selectable attribute.
- Secure HL7 compatible image management system.

Tag dermoscopic images to overview photos for efficient exams and accurate follow-ups.

- USB tethering with D200 dermatoscope or wireless tagging with VEOS DS3.
- All images associated with a lesion are linked to a unique number and tagged to the 3D body map.
- Selectable tagging routines provided to accommodate workflow preferences.
- All photos, notes and attributes associated with a lesion are available for instant review and comparison.

Easy surveillance with side-by-side comparison of overview and dermoscopic images.

- With Markerless Tracking, body maps are automatically registered to ensure the same anatomical site is visible and aligned in both views.
- Compare all image capture and lighting modalities side-by-side.
- Full screen close-up image review with zoom capability.
The DermaGraphix Loupe Tool provides additional viewing modalities for enhanced lesion assessment.

Viewing modalities include:
- High resolution 3D image (shown)
- Geometry (gray mode)
- High resolution source

Comparing lesions anywhere on the skin surface without perspective distortion.

**DermaGraphix** can locate lesions on the overview image according to the clinician’s own criteria (nevus confidence, asymmetry, color). Spiral diagram mode can be used as a second look for the “ugly duckling” or by the medical staff to assist in selecting lesions for dermoscopy.

**additional applications**

- Psoriasis
- Vitiligo
- Plastic and reconstructive surgery
- Burn management
- Lymphedema management
- Neurofibromatosis

**Patented 3D cross-polarized lighting clearly reveals pigmentation variation.**

**DermaGraphix Viewer** empowers patients to check for changes between office visits.

- Simple, intuitive user interface.
- Includes both overview and close-up images.
- Data stored on a secure, password protected and encrypted USB flash drive.
VEOS® DS3 Canfield’s exclusive optics and lighting combined with wireless image capture.

• Sequentially capture cross-polarized and non-polarized images
• Capture both clinical (overview) and dermoscopy photos
• Contact and non-contact imaging
• 10x magnification
• Integrated iPod® Touch for touch screen operation

VEOS SLR captures consistent, reproducible dermoscopic images.

• 22mm field of view and high resolution capture.
• Sequentially capture cross-polarized and non-polarized images in either contact or non-contact modes.

VISIOMED D200evo A high-resolution digital dermatoscope with quality, flexibility and efficiency all in a compact, hand-held system.

• 15–200x magnification
• Polarized and non-polarized imaging
• Tag and capture using the touch screen and keypad for computer-free dermoscopy photos
• Capture both clinical (overview) and dermoscopy photos

CANFIELD dermatoscopes Canfield dermatoscopes are compatible with DermaGraphix software so you can easily link each close up image to its corresponding tagged lesion in the 3D body map.
