THE 3D imaging solution for FACE, BREAST, and BODY.
Simplified consultation process with VECTRA H2 and Sculptor software.

**CAPTURE**
- a 3D image

**ASSESS**
- and educate

- Differentiate your practice
- Communicate the possibilities
- Educate your patients
- Close more complementary procedures
- Increase patient satisfaction

CANFIELD SCIENTIFIC  www.canfieldsci.com / info@canfieldsci.com / phone +1.973.434.1201 / (USA) 800.815.4330
Show your patients the exciting possibilities of their anticipated aesthetic procedures with Sculptor 3D software . . .

only from CANFIELD.
Automated measurements, some only possible with 3D technology, help your patients understand their current condition.

Automated Markerless Tracking provides a dynamic assessment of skin surface changes. Skin surfaces are automatically aligned, tracked and mapped. Vector arrows provide a precise indication of the direction and magnitude of skin movement, which is ideal for encouraging future treatments. Physician review of outcomes helps refine treatment techniques.

Gray mode reveals contours, presenting opportunities for corrective procedures. Canfield’s proprietary RBX® technology separates the unique color signatures of Red and Brown skin components for unequaled visualization of skin conditions.
simulate outcomes

**Intuitive interface** helps you achieve realistic 3D results from day one.

Slider-based dorsal height adjustment for instantaneous three-dimensional rhinoplasty simulation.

**Contouring** Simulate removing or adding volume.

**Visualize** the degree of contour change with a color distance map.

Overlaying her pre-op image with the simulated outcome makes the differences more apparent.

**Close more complementary procedures**

Demonstrate the difference between the likely outcome with only one or multiple procedures. With Face Sculptor you can explore the possibilities and help your patient decide on the best possible treatment plan.

VeCTRA H2 is not intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of diseases. VeCTRA H2 is for illustrative purposes to facilitate conversations with patients about surgical expectations. It cannot be relied upon for and does not take the place of proper pre-surgical measurements and planning.

assess and educate

**Automated measurements**, some only possible with 3D technology, help your patients understand their current condition.

Breast Sculptor’s Education Checklist provides a series of customizable disclaimers with relevant visual tools and measurements to streamline your informed consent process. Print a signed summary of topics covered.

simulate outcomes

**Intuitive interface** helps you achieve realistic 3D results from day one.

Sculptor’s dynamic soft tissue modeling technology generates actual 3D models of the implants you select from the product catalogs you normally use. A realistic outcome is then calculated based upon gravity, shape, and the placement of selected implants.

**Mastopexy** interface in Breast Sculptor closely models the way you perform surgery, including adjustable incisions used to simulate the excising of skin.

Compare multiple implant scenarios with different size, style and shape options.
Complementary procedures  Help your patient decide on the best possible treatment plan by showing the difference between the likely outcome with single or multiple procedures.

Body Contouring  Simulate removing or adding volume.

Overlaying  her pre-op image with the simulated outcome makes the differences more apparent.

Automated circumference and volume measurements for body contouring, only possible with 3D technology and 360° imaging.

ViewMyConsult® web portal helps you stay connected to your patients as they consider the possibilities of aesthetic procedures. By accessing a secure, password-protected web portal, patients can view their 3D pictures in the privacy of their own home. Your patient can take it all home with ViewMyConsult and personalized printed reports.

Optional IntelliStage™ allows for fast and easy 360° capture.

VECTRA H2 flash folds for safe and compact transport.

Custom case included.
Portable, lightweight, easy to use

Photographic quality 3D images

Innovative flash provides studio quality lighting for optimal viewing of topography and contours

Two unique sets of ranging lights—one for face and one for body—ensure optimal capture distance and resolution

Unrivaled assessment and consultation software
